

## Medical Writing on the CARA Life Sciences Platform™

The CARA Life Science Platform includes data-to-document tools to automatically generate Clinical Protocols and Study Reports, and then edit those documents using Structured Content Authoring (Component-based Authoring)

### Generate Protocols & CSRs

The unique data-to-documents capabilities of the CARA Life Science platform allow you to generate Protocols and Clinical Study Reports at the click of a mouse. The document content is assembled in a formatted state based on data and concatenation rules defined on templates, and the output document can then be manually adjusted ready for regulatory submission or eTMF use

### Structured Content Authoring

Leverage the CARA Structured Content Authoring (also known as component-based authoring) for creating documents that share common components e.g. study reports and protocols. Authors can re-use components, and get alerted when template components they used are updated, or other users have updated a shared component, and authors can then decide whether to incorporate the latest updates or not

### External Collaboration

Use the tools in CARA to invite users to a time-limited access to the CARA Life Science platform to collaborate on individual document(s). This collaboration is in a secure environment with version control and auditing. The collaboration can include review or collaborative authoring, where multiple users can edit the same document at the same time

## What is the CARA Life Sciences Platform?

The CARA Life Sciences platform is an enterprise cloud for managing content, data, and business processes through a platform of seamlessly connected apps.

For the first time, the platform provides a vast selection of out-of-the-box solutions for Regulatory, Quality, Safety, and Clinical, combined with the ability to rapidly design & implement other low-code apps to manage your unique processes and requirements.

We believe in a true enterprise platform, where information from all parts of your business can drive and automate work without additional systems and integrations. That's why you can add new applications and use cases to the platform with no additional licensing.

Begin the digital transformation of your business today, by choosing an enterprise platform that gives you the freedom to innovate for tomorrow.
