

Partner Profile – Generis and Daelight

Daelight Solutions is an IT consulting company that is focused on meeting the enterprise information challenges faced by companies in the pharmaceutical, biotech and medical device industries. They offer strategy & advisory, program/project management, business analysis, business process optimization, implementation, integration, and migration services.

“Our people have worked at large and small consulting firms, Tier 1, 2 and 3 pharma, biotech, and medical device companies. We know your challenges, and we know how to meet them”

Why Daelight?

- Unbiased Advice
- Unparalleled execution
- Years of experience delivering large scale, highly complex, solutions to Life Sciences companies
- Delivers the skills and professional leadership to bridge the gap between vendors and in-house teams, making client investments work
- Strategic experience and technical expertise to deliver meaningful results and value for clients
- Extensive hands-on experience in the Life Sciences domain
- Bring actionable knowledge to both large and small pharmaceutical and biotechnology firms

Why Generis?

- Over 20 years experience in Life Sciences
- Global reach
- Dedicated support team
- Information flow across the platform enabling re-use, maximum efficiency, control – achieved through the new CARA Workspace
- Designed for Regulated Business Processes providing flexibility, deep functionality, integrations
- Continued innovation and product development
- Flexibility to suit the customer's requirements
- Out of the box Packages now available that customers can still personalise

Previous Experience

Generis and Daelight have a shared client base. Daelight is specifically focused on the Life Science industry, working across Clinical, Regulatory, Pharmacovigilance, Quality & Manufacturing and Commercial. Generis also works across all these areas and the two companies have been involved in a number of similar projects. The CARA Workspace from Generis provides solutions for different business needs including data management, document management and case management. Regulated industries such as Life Science particularly benefit from CARA as it allows them to easily manage different modules on one platform.

Future Plans

Daelight is looking to expand and grow its current customer base while continuing to support existing customers. Currently USA East-coast based, Daelight is also looking to expand with new team members on the west coast, as well as in Europe, to better support their customers globally. Generis is also experiencing a period of huge growth with the vast development of the CARA Workspace; now available as a standalone repository, rather than just a user interface for Documentum. The two companies hope to collaborate on projects together where, for example, a client may want an external company for additional assistance with process refinement, migration, integration, or implementation.

About

Daelight Solutions is an IT consulting company that is relentlessly focused on meeting the enterprise information challenges of the life sciences industry.
