LIFE SCIENCES PLATFORM

Batch Records Management on the CARA Life Sciences Platform™

Manage the correct documentation and batch record management process demonstrating that each product is manufactured according to industry standards and Good Manufacturing Practices (GMP). Empower easy communication with internal and external stakeholders including regulatory agencies. Gain oversight and keep track of the equipment, materials, staff, data, labels, events, supplies, laboratory information management systems, process control systems, and enterprise resource planning.

Benefits

Compliance

The CARA Life Sciences platform is 21 CFR Parts 210-211 certified and ensures you adhere to the FDA's CGMPs, allowing you to document the production, packaging and holding of each batch of a drug product.

Traceability

Track and manage the production documents related to a Batch, oversee when they were printed, by whom and why, and get reprints in an audited manner - and/or go electronic for this process.

Granular

The information is stored in a granular manner: easily find and print a single page rather than all documentation for the whole batch.

Better Quality

Avoid data duplication and human error with standardised processes to avoid production delays and decrease time to market.

Single Platform

Be certain that you are accessing the latest version of a document and use our information lake to compile and centralise data and content. Enter once and reuse information, with traceability and access to enterprise-wide information, all one click away.

What is the CARA Life Sciences Platform?

The CARA Life Sciences Platform removes the technological, operational and financial drawbacks of a network of individual systems – instead, our customers can consolidate their processes, data and content onto a single platform of best of breed apps. Users can then create, locate, and re-use information instantly in any process across the organisation, leading to accelerated work with greater accuracy of information.

We provide standardised apps for Regulatory, Quality, Safety, Clinical and Enterprise processes powered by a single information lake that gives users instant access to cross-functional data and enables powerful process optimisation.
