

Using MedDRA on the CARA Life Sciences Platform™

Ensure the data in your CARA Life Science Platform meets the standards and norms of the MedDRA dictionary / thesaurus

What is MedDRA?

A subscription-based product of the International Council for Harmonization of Technical Requirements for Pharmaceuticals for Human Use (ICH)

Why is it used?

Provides a rich and highly specific standardised medical terminology to facilitate sharing of regulatory information internationally for medical products used by humans

Why is it used?

By integrating the CARA platform with governed and regulated dictionaries from MedDRA, CARA Life Science products will provide internationally standardised terms in the regulated industry. These terms would be used in registration, documentation and safety monitoring of medical products both before and after a product has been authorised for sale. This includes all applications in pharmaceuticals, biologics, vaccines and drug-device combination products

What is the CARA Life Sciences Platform?

The CARA Life Sciences Platform removes the technological, operational and financial drawbacks of a network of individual systems – instead, our customers can consolidate their processes, data and content onto a single platform of best of breed apps. Users can then create, locate, and re-use information instantly in any process across the organisation, leading to accelerated work with greater accuracy of information.

We provide standardised apps for Regulatory, Quality, Safety, Clinical and Enterprise processes powered by a single information lake that gives users instant access to cross-functional data and enables powerful process optimisation.
