

Learning Management System (LMS)

Easy-to-use learning management with compliance and reporting built-in

Training and certifying employees in the same system as the documents themselves ensures a seamless experience with greater oversight. The CARA Life Sciences Platform provides the ability to define courses, roles and curricula for such content, but also to log - and generate training certificates for - any external training, providing a complete training picture for employees.

Benefits

Training Roles and Curricula

Define roles and assign curriculum details to each role. Automatically assign/remove training based on users moving into and out of roles.

Training tests / quizzes

Ensure students have learned the key points in the training by creating quizzes to complete the training.

Document-based training

Define and track training on key documents such as SOPs, including using video or other assets.

External training

Log and capture external training courses taken, including attaching Certificates, and generate a PDF record for archival purposes.

Reporting

Full reporting on training taken, overdue, and performance, from both a student and training course perspective.

Provide an easy-to-use LMS focussed on compliance

Corporate policies and procedures mandate staff training and certification. Integrating this tracking within the document management system facilitates a streamlined experience and comprehensive reporting. CARA offers functionality to establish courses, roles and curricula for such content. Additionally, it enables the recording of external training and the attachment or generation of training certificates. This approach provides a holistic view of employee training records.

Secure document management

Create and manage controlled documents such as SOPs and Policies, including esignatures.

Automatic assignment

Automatically assign training for the appropriate training roles, including recurring training where annual or other periodic retraining is required. Remove training from users as they change job roles.

Video assets / discussions

Provide video and other media assets to guide or support the training. Facilitate a discussion thread relating to training and/or the controlled documents.

Connect to external systems

Link to external systems for a variety of purposes including pulling / pushing data or documents and setting up training related to external systems.

Training Library / self sign-up

Create a library of courses which users can browse and assign to themselves where it is optional to their job role.

Reporting and analytics

Track and escalation training completion by user, course, job role, and visualize the trending over time in the CARA analytics dashboards.
