

Risk Management

Unified management of RMPs

The CARA Life Sciences Platform offers a unified and traceable way to create and distribute Risk Management Plans and associated documents to Affiliates and Distributors. Traditionally, this process would involve multiple external systems - one for sharing content and another for registering and reporting on implementation status. With the CARA platform, Affiliates and Distributors can log in to a simple UI to perform all these tasks in a seamless, integrated manner.

Benefits

Distribution

Trigger workflows for distribution of RMPs and associated documents to affiliates and distributors – manually, or automatically via an API call from an external system.

Documentation

Manage the creation, review, and approval of Risk Management Plans and tools; subsequently provide the documentation required for Regulatory Submissions.

Portal Access

Distributors, affiliates and other third parties can access CARA via a simple portal to acknowledge, submit and confirm required actions with Agencies.

Tracking

Central Regulatory Affairs maintains a real-time view of RMPs, associated documentation, and activities on a per-product and per-country basis. All these elements can be tracked in RIM on the CARA Life Sciences Platform.

Metrics & Analytics

CARA provides an extensive dashboard and analytics capability, which allows reporting on the status of Risk Management and Plan implementations globally.
