

# eTMF

## Modern Content Management

---

Revolutionise clinical trial management with an integrated eTMF on the CARA Life Sciences Platform. Our eTMF solution offers comprehensive, DIA reference-model based documentation management, automated site and trial setup, missing document reports, and a user-friendly investigator / site portal, so you can streamline processes and enhance collaboration.

Seamlessly connected to our powerful CTMS, which serves as a single source of truth for all operational clinical trial data, you'll empower clinical trial managers to make informed decisions based on timely, accurate, and consistent information.

From study initiation and patient recruitment to monitoring and drug supply management, eTMF on the CARA Life Sciences Platform consolidates data across all critical workstreams. Experience the benefits of a unified system built on a single information lake, with the flexibility to integrate external systems as needed. With the CARA Life Sciences Platform, you're not just managing trials – you're optimising them for success.

### DIA Reference Model

Data structure based on the DIA EDM reference model.

### Template Based Approach

Fully configurable templates for document creation, eTMF structures and additional sites.

### Portal

CARA Portal enables third party viewing for simple and secure access by CROs, investigators and trial sites.

### E-signatures

Our eSignature capabilities apply user information into a signature page that can be added to documents automatically depending on business processes.

## Standard eTMF document features

Manage the creation, review, and approval (including eSignature), of eTMF documents using the DIA Reference Model. Use our master data dictionaries for industry picklists and product or study data.

## Metrics & Analytics

CARA provides an extensive dashboard and analytics capability, which allows management to track things like the status by country, site, or study, metrics over a particular time period, as well as the all-important "Missing Documents Report". All dashboards in CARA provide clickable graphs, which show you the items or documents that make up the data points on the graph.

## Automations

The power of an eTMF system is in the automations and solving pain points – for example, eTMF is seamlessly connected to CTMS as it's all based on a single information lake (or can be integrated with external systems), automated site and trial plan setup, and easy de-duplication of documents.

## Investigator and Site Portal

Use the simplified CARA Portal for sites and investigators to access and upload eTMF content, and work on content during collaboration, without the need to involve IT in setting up network IDs.
